ASJ REALTY

SHARED RESOURCE INFORMATION TRANSFER PREVENTION POLICY

=====

Document ID: POL-SC-004

Version: 1.0

Effective Date: July 5, 2026

Review Date: July 5, 2027

Owner: Sandra Okonkwo, IT Coordinator

Approved By: Anthony James, Principal Broker

=====

1. PURPOSE

This policy prevents unauthorized and unintended information transfer via shared system resources at ASJ Realty.

2. SHARED RESOURCE CONTROLS

2.1 Memory and Storage Isolation

- All ASJ Realty systems run Windows 11 with virtualization-based security (VBS) enabled, which isolates kernel memory from user processes
- Hyper-V container isolation prevents cross-process memory access (enabled by default on Windows 11)
- File system: NTFS permissions prevent one user from accessing another user's profile folder

2.2 Print Spooler

- Print jobs are cleared from the spooler after completion
- Printer memory is cleared between jobs (configured on HP LaserJet printer - Auto Clear after job)
- CUI documents must not be left in printer output tray

2.3 Clipboard

- Remote Desktop clipboard sharing is disabled for sessions involving CUI systems (GPO: Restrict clipboard redirection)
- Users are trained not to copy CUI to shared clipboards

2.4 Temporary Files

- Temp folders (%TEMP%) are private per user (NTFS permissions)
- Browser cache is cleared on exit (configured via Intune Edge policy for CUI-accessing workstations)
- Disk cleanup runs automatically on shutdown (GPO)

3. CLOUD SHARED RESOURCES

- SharePoint: CUI site permissions prevent one department from seeing another's CUI content
- OneDrive: Individual user storage is private by default
- Teams channels: CUI channel is private channel (invite only)
