ASJ REALTY

ATTACK DETECTION AND MONITORING POLICY

=====

Document ID: POL-SI-006

Version: 1.0

Effective Date: July 10, 2026

Review Date: July 10, 2027

Owner: Sandra Okonkwo, IT Coordinator

Approved By: Anthony James, Principal Broker

=====

## 1. PURPOSE

This policy requires ASJ Realty to monitor information systems to detect attacks and indicators of potential attacks.

## 2. MONITORING TOOLS AND TECHNIQUES

### 2.1 Microsoft Sentinel (SIEM)

- Centralized log aggregation from all ASJ systems
- Analytic rules detect attack patterns:
  - \* Brute force / credential stuffing
  - \* Lateral movement indicators
  - \* Privilege escalation followed by data access
  - \* Data exfiltration (large download events)
  - \* Malware command-and-control (C2) communication
  - \* Impossible travel / impossible access patterns

### 2.2 Microsoft Defender for Endpoint (EDR)

- Behavioral detection on all endpoints
- Attack surface reduction (ASR) rules active
- Automated investigation and response (AIR)
- Detects: ransomware behavior, fileless attacks, living-off-the-land techniques, injection attacks

### 2.3 Azure AD Identity Protection

- Risk-based detections: leaked credentials, anonymous IP, malware-linked IP, impossible travel, suspicious browser

### 2.4 Network-Level Detection

- Cisco Meraki IDS/IPS: network intrusion signatures
- Cisco Umbrella: DNS anomaly detection

## 3. ALERT RESPONSE

Alerts are categorized by severity:

High/Critical: Sandra Okonkwo responds within 2 hours

Medium: investigated next business day

Low: reviewed weekly

Confirmed attacks trigger the ASJ IR Plan (POL-IR-001).

## 4. THREAT INTELLIGENCE

Microsoft Sentinel integrates Microsoft Threat Intelligence to correlate against known IOCs automatically.
