BLUE RIDGE TECHNOLOGY SOLUTIONS LLC
USER AND MANAGEMENT FUNCTIONALITY SEPARATION POLICY

=====

Document ID: POL-SC-003
Version: 1.0
Effective Date: June 5, 2026
Review Date: June 5, 2027
Owner: Nathan Cruz, Lead Systems Engineer
Approved By: Victor Osei, President

=====

1. PURPOSE

This policy separates user functionality from system management functionality to prevent unauthorized modification of system configuration through normal user interfaces.

2. SEPARATION MECHANISMS

2.1 Account Separation (Dual Account Model)

IT staff maintain two accounts:

- Standard account (e.g., ncruz): daily user tasks
 - Admin account (e.g., adm_ncruz): management functions only
- See POL-AC-006 for full policy. This prevents management functions from being accessible through the regular user session/interface.

2.2 Network Separation

Management traffic (SNMP, WinRM, SSH, HTTPS to admin consoles) is restricted to the management VLAN (VLAN 99) or the corporate VLAN with Meraki ACLs restricting which source IPs can reach management ports.

2.3 Server Management

Server management (RDP, server console) is only accessible:

- From the admin workstation (BRTS-AdminWS-001)
- After VPN connection (for remote)
- Using the adm_* account

Standard workstations cannot initiate RDP to servers.

2.4 Application Administration vs. Use

Admin interfaces for applications (e.g., Azure portal, Intune console, Meraki dashboard) are accessible only through the admin account and MFA, not standard accounts.

3. VERIFICATION

Nathan Cruz verifies separation quarterly by confirming:

- Standard accounts have no admin console access
- Management ports not reachable from user workstations without admin credentials
