

■ACCESS CONTROL IMPLEMENTATION EVIDENCE

Organization: Bumpass Fire & Rescue

Control: 3.1.17 - Wireless Access Authentication and Encryption

Prepared By: Mike Sadler, IT Coordinator | Date: 2026-07-10

1. SUMMARY

Evidence that Bumpass Fire & Rescue protects wireless CUI network access with strong authentication and encryption.

2. WIRELESS ENCRYPTION CONFIGURATION

CUI SSID: CUI-Bumpass Fire & Rescue

Security Mode: WPA3-Enterprise (802.1X)

Encryption: AES-CCMP 256-bit

Authentication: Certificate-based EAP-TLS

RADIUS Server: NPS on bumpassfire.org

Disabled protocols: WEP, TKIP, WPA-Personal on CUI SSID

Guest SSID: Guest-Bumpass Fire & Rescue

Security Mode: WPA3-SAE (Personal - internet only, no CUI access)

VLAN: Guest VLAN 20 (firewall-isolated)

3. CERTIFICATE CONFIGURATION

Issued by: Bumpass Fire & Rescue Internal CA (bumpassfire.org)

Certificate Template: WiFi-Client-Auth

Auto-enrollment: Via Intune SCEP profile

Expiry: 1 year | Auto-renewal enabled

4. QUARTERLY REVIEW

Date: 2026-06-30 | Reviewer: Mike Sadler

Result: All APs confirmed WPA3/AES. No deprecated protocols active.

5. CONCLUSION

Bumpass Fire & Rescue protects wireless CUI network with WPA3-Enterprise and certificate-based 802.1X per control 3.1.17.
