

■RISK ASSESSMENT IMPLEMENTATION EVIDENCE

Organization: Bumpass Fire & Rescue

Control: 3.11.2 - Vulnerability Scanning

Prepared By: Mike Sadler, IT Coordinator | Date: 2026-07-10

1. SUMMARY

Evidence that Bumpass Fire & Rescue conducts periodic vulnerability scans of CUI systems.

2. SCANNING TOOLS

Internal: Microsoft Defender Vulnerability Management (integrated with Intune)

External: Tenable.io (cloud-based - quarterly external scans)

Network: Nmap (port/service scan, quarterly)

3. MOST RECENT SCAN RESULTS

Date: 2026-07-01 | Tool: Defender Vulnerability Management + Tenable.io

Endpoints Scanned:

- BFR-WS-001: 0 Critical, 0 High, 2 Medium (known browser outdated - patched 2026-07-02), 3 Low
- WS-002: 0 Critical, 0 High, 0 Medium, 1 Low

External Scan (bumpassfire.org web presence):

- No open ports beyond 443 (HTTPS). TLS A+. No vulnerabilities found.

4. VULNERABILITY HISTORY (Q2 2026)

CVE-2026-xxxx | Medium | Windows DWM | Detected 2026-04-10 | Patched 2026-04-12 (2 days)

CVE-2026-yyyy | Low | Edge browser | Detected 2026-05-22 | Patched 2026-05-24 (2 days)

Critical/High vulnerabilities this quarter: 0

5. CONCLUSION

Bumpass Fire & Rescue conducts quarterly vulnerability scans with rapid remediation of all findings per control 3.11.2.
