

■SYSTEM AND COMMUNICATIONS PROTECTION IMPLEMENTATION EVIDENCE

Organization: Bumpass Fire & Rescue

Control: 3.13.1 - Network Boundary Protection

Prepared By: Mike Sadler, IT Coordinator | Date: 2026-07-10

1. SUMMARY

Evidence that Bumpass Fire & Rescue monitors and controls communications at CUI network boundaries.

2. BOUNDARY PROTECTION ARCHITECTURE

Perimeter Firewall: Azure Firewall (managed by Mike Sadler)

IPS/IDS: Azure Firewall IDPS (enabled in Alert+Deny mode)

Network Segmentation: CUI VLAN (10.0.2.0/24) isolated from public internet

3. FIREWALL RULE SUMMARY

Zone | Direction | Action | Protocol/Port

Internet | Inbound | DENY ALL | All (default deny)

VPN Gateway | Inbound | ALLOW | UDP 500, 4500 (IKEv2)

CUI VLAN | Outbound | ALLOW | TCP 443 (HTTPS to approved M365 endpoints)

CUI VLAN | Outbound | ALLOW | UDP 53 (DNS to Mike Sadler-managed resolver)

CUI VLAN | Outbound | DENY ALL | All others

4. IPS ALERT LOG (June 2026)

Date: 2026-06-12 - Alert: Port scan from 185.220.x.x - Action: BLOCKED by IDPS

Date: 2026-06-25 - Alert: Outbound connection attempt to known-bad IP - Action: BLOCKED

5. QUARTERLY RULE REVIEW

Date: 2026-06-30 | Reviewer: Mike Sadler

Result: 2 legacy rules removed. All remaining rules confirmed active and necessary.

6. CONCLUSION

Bumpass Fire & Rescue protects CUI network boundaries with Azure Firewall + IDPS and quarterly rule reviews per control 3.13.1.
