

■SYSTEM AND COMMUNICATIONS PROTECTION IMPLEMENTATION EVIDENCE

Organization: Bumpass Fire & Rescue

Control: 3.13.13 - Mobile Code

Prepared By: Mike Sadler, IT Coordinator | Date: 2026-07-10

1. SUMMARY

Evidence that Bumpass Fire & Rescue controls mobile code on CUI endpoints.

2. OFFICE MACRO CONFIGURATION

GPO/Intune Policy: OfficeMacro-Control-Bumpass Fire & Rescue

Settings applied:

- Block macros from files downloaded from the Internet: Enabled
- Disable all macros except digitally signed macros: Enabled
- Require macros to be signed by a trusted publisher: Enabled

Trusted location: SharePoint site ("Bumpass Fire & Rescue CUI" site library only)

3. BROWSER (MICROSOFT EDGE) CONFIGURATION

Intune Configuration Profile: EdgeHardening-Bumpass Fire & Rescue

Key settings:

- JavaScript from Restricted Sites: Blocked
- ActiveX: Disabled (not supported in Edge)
- Enhanced Security Mode: Enabled
- SmartScreen: Enabled (blocks known malicious scripts)
- WebAssembly: Restricted to trusted sites

4. MACRO EXECUTION LOG (Q2 2026)

Blocked macro attempts: 4 (all from email attachments originating from external sources)

Allowed macro executions: 0 (no trusted-location macros executed this quarter)

No unsigned macros executed.

5. CONFIGURATION VERIFICATION

Date: 2026-06-30 | Tool: Intune device compliance report

BFR-WS-001 - OfficeMacro-Control-Bumpass Fire & Rescue: Compliant

BFR-WS-001 - EdgeHardening-Bumpass Fire & Rescue: Compliant

6. CONCLUSION

Bumpass Fire & Rescue blocks unsigned macros and controls browser-based mobile code execution via Intune/GPO per control 3.13.13.
