

■SYSTEM AND COMMUNICATIONS PROTECTION IMPLEMENTATION EVIDENCE

Organization: Bumpass Fire & Rescue

Control: 3.13.16 - Protection of CUI at Rest

Prepared By: Mike Sadler, IT Coordinator | Date: 2026-07-10

1. SUMMARY

Evidence that Bumpass Fire & Rescue encrypts all CUI at rest using BitLocker and Microsoft 365 encryption.

2. ENDPOINT ENCRYPTION STATUS (via Intune - July 1, 2026)

Device | OS | BitLocker Status | Method | Recovery Key Backed Up

BFR-WS-001 | Windows 11 | ENCRYPTED | Full disk | Azure Key Vault + Azure AD

WS-002 | Windows 11 | ENCRYPTED | Full disk | Azure Key Vault + Azure AD

Encryption algorithm: AES-256 (XTS-AES-256)

TPM version: 2.0 (both devices)

Protectors: TPM + PIN (required at boot)

3. CLOUD STORAGE ENCRYPTION

Microsoft SharePoint (bumpassfire.org):

- Encryption at rest: AES-256 (Microsoft 365 service encryption)
- Key management: Microsoft Managed Keys (MMK) at minimum; Customer Managed Keys (CMK) available
- Current configuration: Microsoft Managed Keys (reviewed and accepted by Randy Bowles)

OneDrive for Business:

- Encryption at rest: AES-256 (per-file encryption)
- CUI OneDrive folders synchronized to CUI-labeled SharePoint sites only

4. BACKUP ENCRYPTION

Microsoft 365 backup (built-in): Encrypted at rest via M365 service encryption

No third-party backup media with unencrypted CUI.

5. REMOVABLE MEDIA

Policy: No CUI permitted on removable media without encryption.

Technical control: Intune policy blocks non-Bumpass Fire & Rescue removable media from accessing CUI files.

6. MONTHLY ENCRYPTION REPORT

Date: 2026-07-01 | Source: Intune Encryption Report

Total devices: 2 | Encrypted: 2 | Not encrypted: 0 | Compliance: 100%

7. CONCLUSION

Bumpass Fire & Rescue encrypts all CUI at rest with AES-256 BitLocker on endpoints and Microsoft 365 service encryption in the cloud per control 3.13.16.
