BUMPASS FIRE & RESCUE
DMZ AND NETWORK SEGMENTATION POLICY

=====

Document ID: POL-SC-005
Version: 1.0
Effective Date: June 1, 2026
Review Date: June 1, 2027
Owner: Mike Sadler, IT Administrator
Approved By: Chief Randy Bowles

=====

1. PURPOSE

This policy implements subnetworks for publicly accessible system components that are physically or logically separated from internal networks containing CUI.

2. NETWORK SEGMENTATION DESIGN

2.1 Internal Network (CUI Zone)

VLAN 10 - 192.168.10.0/24

- CUI workstations and servers
- Domain controllers
- NAS with CUI data
- No direct internet access (all internet via proxy/firewall)

2.2 Guest Network (Public Zone)

VLAN 20 - 192.168.20.0/24

- Visitor WiFi
- Internet access only
- NO access to VLAN 10 (CUI zone)
- Firewall rule: DENY VLAN 20 -> VLAN 10 (explicit)

2.3 IoT / Physical Security Zone

VLAN 30 - 192.168.30.0/24

- Security cameras
- Smart locks and access control hardware
- Internet access to vendor cloud only (limited ports)
- NO access to VLAN 10 or VLAN 20

2.4 No Public-Facing Servers

BFR does not host any publicly accessible web servers or services on-premises. The public website is externally hosted (SaaS). Therefore, no DMZ is required for servers. Public-facing content managed by vendor (no CUI).

3. FIREWALL ENFORCEMENT

Cisco ASA controls inter-VLAN routing.
VLANs are separate broadcast domains (Cisco Meraki switches).
