

■SYSTEM AND COMMUNICATIONS PROTECTION IMPLEMENTATION EVIDENCE

Organization: Bumpass Fire & Rescue

Control: 3.13.8 - Encryption of CUI in Transit

Prepared By: Mike Sadler, IT Coordinator | Date: 2026-07-10

1. SUMMARY

Evidence that Bumpass Fire & Rescue encrypts all CUI during transmission.

2. TLS CONFIGURATION

Web Services / SharePoint CUI:

- Protocol: TLS 1.3 (preferred), TLS 1.2 (fallback)
- Disabled: SSL 3.0, TLS 1.0, TLS 1.1
- Cipher suite: TLS_AES_256_GCM_SHA384 (TLS 1.3) / TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 (TLS 1.2)
- Certificate: Microsoft-managed (STAR cert for *.sharepoint.com)

Endpoints (Windows 11):

GPO: TLS-Hardening-Bumpass Fire & Rescue

Registry values set:

- HKLM\SYSTEM\...\TLS 1.0: DisabledByDefault=1, Enabled=0
- HKLM\SYSTEM\...\TLS 1.1: DisabledByDefault=1, Enabled=0
- HKLM\SYSTEM\...\TLS 1.2: DisabledByDefault=0, Enabled=1

3. EMAIL ENCRYPTION

Exchange Transport Rule: RequireTLS-CUI-Outbound

- Scope: Email from @bumpassfire.org to external recipients with CUI keywords
- Action: Require TLS (connection rejected if recipient does not support TLS)

TLS fallback: S/MIME available for Mike Sadler and Randy Bowles accounts

4. VPN ENCRYPTION

Protocol: IKEv2 | Encryption: AES-256-GCM | Integrity: SHA-256

5. QUARTERLY REVIEW

Date: 2026-06-30 | Tool: SSL Labs / IIS Crypto

Result: All Bumpass Fire & Rescue services TLS 1.2/1.3 only. Score A+. No weak protocols active.

6. CONCLUSION

Bumpass Fire & Rescue encrypts all CUI in transit using TLS 1.2+, AES-256 VPN, and email TLS enforcement per control 3.13.8.
