

## ■SYSTEM AND COMMUNICATIONS PROTECTION IMPLEMENTATION EVIDENCE

Organization: Bumpass Fire & Rescue

Control: 3.13.9 - Network Session Termination

Prepared By: Mike Sadler, IT Coordinator | Date: 2026-07-10

### 1. SUMMARY

Evidence that Bumpass Fire & Rescue terminates network sessions after defined inactivity periods.

### 2. SESSION TIMEOUT CONFIGURATION

VPN (GlobalProtect / Azure VPN):

- Idle timeout: 60 minutes
- Maximum session: 8 hours
- Action: Session disconnected; full re-authentication required

SharePoint / Microsoft 365:

- Idle session timeout: 30 minutes (configured in M365 Admin Center)
- Token lifetime: 1 hour (Conditional Access - SignInFrequency policy)
- Persistent browser session: DISABLED

Windows Interactive Sessions (RDP / Local):

- Idle disconnect: 60 minutes (GPO: SessionTimeout-Bumpass Fire & Rescue)
- Applies to: All Bumpass Fire & Rescue endpoints

### 3. SESSION TERMINATION TEST

Date: 2026-06-25 | Tester: Mike Sadler

Test 1: SharePoint idle session

Opened SharePoint CUI site on BFR-WS-001 (m.sadler@bumpassfire.org). Left idle 35 minutes.

Result: Session terminated. Full MFA re-authentication required. PASS.

Test 2: VPN idle session

Connected GlobalProtect VPN. Left idle 65 minutes.

Result: VPN disconnected. Full re-authentication required to reconnect. PASS.

### 4. CONCLUSION

Bumpass Fire & Rescue terminates network sessions after defined idle periods on all CUI systems per control 3.13.9.
