BUMPASS FIRE & RESCUE
AUDIT REVIEW, ANALYSIS, AND CORRELATION POLICY

=====

Document ID: POL-AU-005
Version: 1.0
Effective Date: April 1, 2026
Review Date: April 1, 2027
Owner: Mike Sadler, IT Administrator
Approved By: Chief Randy Bowles

=====

1. PURPOSE

This policy establishes the process for correlating audit review and analysis across multiple sources to identify suspicious patterns and potential security incidents.

2. CORRELATION APPROACH

BFR uses Microsoft Sentinel as the central correlation platform. Logs from all sources are ingested and correlated automatically using Sentinel analytic rules and Microsoft threat intelligence.

3. AUTOMATED CORRELATION RULES

Active Sentinel analytic rules include:

- Brute force against Azure AD (multiple failed logons from same IP followed by success)
- Impossible travel (logon from two geographically separated locations in a short time)
- Privilege escalation followed by unusual data access
- New account creation followed by immediate data exfil
- Logon during non-business hours with data access

4. MANUAL REVIEW

Mike Sadler performs a weekly manual log review covering:

- Failed logon attempts exceeding 10/week per user
- After-hours logon activity
- Large file downloads (>500MB in one session)
- Access to CUI folders by accounts not normally accessing them

5. REPORTING

Suspicious patterns are escalated to Chief Bowles immediately. Monthly summary reviewed at department leadership meeting.
