

■IDENTIFICATION AND AUTHENTICATION IMPLEMENTATION EVIDENCE

Organization: Bumpass Fire & Rescue

Control: 3.5.11 - Authentication Feedback Obscuring

Prepared By: Mike Sadler, IT Coordinator | Date: 2026-07-10

1. SUMMARY

Evidence that Bumpass Fire & Rescue obscures authentication feedback on all CUI system login interfaces.

2. AUTHENTICATION INTERFACE REVIEW

Date: 2026-06-20 | Reviewer: Mike Sadler

Interfaces reviewed: Windows 11 Login, Azure AD / M365 Web Login, VPN Login, SharePoint

Windows 11 Login (BFR-WS-001):

- Password field: Masked (dots) by default
 - Error message: "The user name or password is incorrect" (generic - does not specify which)
 - Credential Manager: Not saved for CUI resources
- Result: PASS

Azure AD Web Login (login.microsoftonline.com):

- Password field: Masked with asterisks, optional "Show password" toggle
 - Error: "Your account or password is incorrect" (generic)
- Result: PASS

VPN Login (GlobalProtect):

- Password field: Masked
 - Error: "Authentication failed" (generic)
- Result: PASS

3. PASSWORD FIELD CONFIGURATION (GPO)

GPO: PasswordFieldMask-Bumpass Fire & Rescue

- DisablePasswordReveal: 1 (hides "show password" eye icon on Windows login)
- Applied to: All Bumpass Fire & Rescue Windows endpoints

4. BROWSER SETTINGS

Microsoft Edge policy: PasswordManagerEnabled = False (no password saving on CUI endpoints)
This prevents autofill from potentially exposing credentials.

5. CONCLUSION

All Bumpass Fire & Rescue authentication interfaces obscure password feedback and use generic error messages per control 3.5.11.
