

■MAINTENANCE IMPLEMENTATION EVIDENCE

Organization: Bumpass Fire & Rescue

Control: 3.7.5 - Remote Maintenance MFA

Prepared By: Mike Sadler, IT Coordinator | Date: 2026-07-10

1. SUMMARY

Evidence that Bumpass Fire & Rescue requires MFA for remote maintenance sessions and terminates them after use.

2. REMOTE MAINTENANCE SESSION CONTROLS

Platform: Azure Bastion (browser-based RDP/SSH - no client required)

MFA Requirement: Azure Bastion requires Azure AD authentication + MFA (Conditional Access policy: MFA-Required-All)

Session Termination: Automatic after 60 minutes idle or manual disconnect by Mike Sadler

Session Recording: Enabled in Azure Bastion (video recording of all sessions)

3. REMOTE MAINTENANCE LOG (FY2026)

Date	Technician	System	MFA Used	Duration	Terminated	Recorded
------	------------	--------	----------	----------	------------	----------

2026-03-10	Network-A	SW-CORE	Yes	45m	Yes	Yes
------------	-----------	---------	-----	-----	-----	-----

2026-05-20	HP Support	BFR-WS-001	Yes	1h 02m	Yes	Yes
------------	------------	------------	-----	--------	-----	-----

2026-06-12	Mike Sadler	Azure AD	Yes	35m	Yes	Yes (Azure log)
------------	-------------	----------	-----	-----	-----	-----------------

4. MFA VERIFICATION

For each session above, MFA authentication confirmed in Azure AD sign-in logs.

Sign-in Log Entry (2026-05-20):

User: maintenance-vendor@bumpassfire.org (temporary vendor account)

MFA Method: Authenticator App push

Result: Success

Conditional Access: Complied

5. SESSION TERMINATION VERIFICATION

Azure Bastion session logs confirm all sessions terminated upon disconnect.

No sessions exceeded 2 hours or remained open after maintenance completion.

6. CONCLUSION

Bumpass Fire & Rescue requires MFA for all remote maintenance sessions with automatic recording and termination per control 3.7.5.
