KEITH THE DRONE GUY LLC
MOBILE DEVICE CUI ENCRYPTION POLICY

=====

Document ID: POL-AC-019
Version: 1.0
Effective Date: February 1, 2026
Review Date: February 1, 2027
Owner: Keith Merritt, Owner/IT Lead
Approved By: Keith Merritt, Owner

=====

1. PURPOSE

This policy requires that CUI on mobile devices and mobile computing platforms is encrypted to protect it from unauthorized disclosure if a device is lost or stolen.

2. SCOPE

Applies to all mobile devices and laptops used by Keith the Drone Guy LLC employees that store, process, or could potentially access CUI.

3. ENCRYPTION REQUIREMENTS

3.1 iPhones / iPads

- iOS hardware encryption (AES-256) is enabled by default when a passcode is set – required for all enrolled devices
- Verified via Intune compliance check

3.2 Laptops (Windows)

- BitLocker full-disk encryption required (AES-256)
- Recovery keys escrowed in Azure AD
- Pre-boot authentication: PIN required

3.3 Laptops (Mac) – If Used

- FileVault 2 encryption required
- Recovery key stored in company password vault

3.4 Removable Storage

- USB drives used with mobile devices must use BitLocker To Go or equivalent AES-256 encryption
- No unencrypted USB drives may be used with CUI data

4. ENFORCEMENT

Intune compliance policy blocks CUI app access if device encryption is not confirmed. Devices without encryption cannot access SharePoint CUI folders or company email.

5. LOST/STOLEN PROCEDURE

Remote wipe via Intune is performed immediately upon report of a lost or stolen device.
