KEITH THE DRONE GUY LLC
DATA ENCRYPTION IN TRANSIT POLICY

=====

Document ID: POL-SC-002
Version: 1.0
Effective Date: February 1, 2026
Review Date: February 1, 2027
Owner: Keith Anderson, Owner/Operator

=====

1. PURPOSE

Keith the Drone Guy LLC transmits CUI including drone flight data, aerial imagery, and survey results to federal clients (USDA, Army Corps of Engineers). This policy ensures all such transmissions are encrypted to protect confidentiality during transit.

2. ENCRYPTION REQUIREMENTS

2.1 All CUI transmitted over any network must be encrypted using FIPS-validated cryptographic algorithms. Minimum standards:

- TLS 1.2 or higher for all web-based transmission
- TLS 1.3 preferred for all new implementations
- AES-256 for file encryption prior to transfer
- SSH (v2) for any command-line remote access

2.2 Prohibited Transmission Methods for CUI:

- Unencrypted HTTP
- FTP (non-SFTP)
- Unencrypted email (plain SMTP)
- USB without encryption
- Personal email accounts (Gmail, Yahoo, etc.)

2.3 Approved File Transfer Methods:

- Microsoft SharePoint (SharePoint Online with TLS 1.3)
- SFTP to client-designated secure drop sites
- DoD SAFE (for DoD clients requiring this method)
- Encrypted email via Microsoft 365 (M365 Message Encryption)

2.4 Email Encryption

- All emails containing CUI must use M365 Message Encryption
- Keith Anderson and all subcontractors are trained on applying the "Encrypt" label in Outlook before sending CUI
- External recipients receive a one-time passcode to open encrypted messages

3. VPN

All remote access to company systems must use the company VPN (Meraki Client VPN with AES-256 encryption).

4. VERIFICATION

Encryption settings are reviewed:

- When any new system or service is added
- Annually as part of the security assessment
- When a new CUI transmission method is proposed

5. ENFORCEMENT

Any CUI transmitted without proper encryption must be reported immediately as a potential data breach and handled

per POL-IR-001 (Incident Response Policy).
