KEITH THE DRONE GUY LLC
AUTHENTICATION FEEDBACK OBSCURING POLICY

=====

Document ID: POL-IA-011
Version: 1.0
Effective Date: March 1, 2026
Review Date: March 1, 2027
Owner: Keith Merritt, Owner/IT Lead
Approved By: Keith Merritt, Owner

=====

1. PURPOSE

This policy requires that feedback during the authentication process obscures authentication information (e.g., passwords) to protect against shoulder-surfing and unauthorized disclosure.

2. REQUIREMENTS

2.1 Password Entry Fields

- All password fields on KDG systems display asterisks (*) or dots (.) in place of the actual characters typed
- No "Show password" toggle is available on internal systems
- Windows login screen: password shown as dots by default (the show/hide password icon is disabled via GPO for CUI-accessing workstations)

2.2 Web Applications

- All web-based login forms must use type="password" HTML attribute, which obscures the password
- Verified quarterly on all applications in use

2.3 Command-Line Authentication

- Scripts that pass credentials must use SecureString objects and not display passwords in console output
- No scripts with hardcoded plaintext passwords are permitted

2.4 MFA Codes

- Authenticator codes are not displayed on shared screens or output to logs
- MFA push notifications do not display the OTP in notification previews (notification preview disabled on company-managed iPhones)

3. TRAINING

Users are trained to never type passwords when someone can observe their screen (shoulder-surfing awareness).
