KEITH THE DRONE GUY LLC

MULTI-FACTOR AUTHENTICATION FOR PRIVILEGED ACCOUNTS POLICY

=====

Document ID: POL-IA-005

Version: 1.0

Effective Date: February 20, 2026

Review Date: February 20, 2027

Owner: Keith Merritt, Owner/IT Lead

Approved By: Keith Merritt, Owner

=====

1. PURPOSE

This policy requires multi-factor authentication for all network access to privileged accounts at KDG.

2. PRIVILEGED ACCOUNTS AT KDG

- Keith Merritt: Azure Global Admin, Intune Admin, Domain Admin
- adm_kmerritt: On-premises domain admin (admin account)

3. MFA REQUIREMENTS FOR PRIVILEGED ACCESS

3.1 Azure AD Privileged Roles

- MFA is required via Conditional Access for all Azure AD role activation and privileged portal access
- Azure AD PIM requires MFA for role activation regardless of location or device
- Acceptable MFA factors: Microsoft Authenticator (preferred), FIDO2 hardware key

3.2 On-Premises Admin Account

- Admin account (adm_kmerritt) used only from designated admin workstation inside the network
- VPN + MFA required before any remote admin session
- Admin workstation cannot browse internet (reducing risk of admin credential theft)

3.3 No MFA Bypass

- No conditional access exclusions for admin accounts
- No trusted locations that bypass MFA for admin roles
- Emergency access account exists with FIDO2 key only (for break-glass scenarios - stored in locked safe)

4. MONITORING

All privileged account sign-ins are logged and reviewed. Any MFA failure on a privileged account triggers an alert.
